

## WCAG 2.0 Checklist: Level AA Website Accessibility

### 1. Captions for live videos

- Caption live videos via software or professional services

### 2. Audio description

- Add audio description soundtracks to any video content

### 3. Contrast

- Use a light background and dark text or vice versa

### 4. Resize text

- Prevent resized text from requiring users to scroll horizontally

### 5. Text images

- Eliminate any images that use images of text to convey content

### 6. Finding pages

- Add an HTML sitemap
- Enable site search

### 7. Headings and labels

- Make headings and subheadings straightforward and descriptive

### 8. Focus visible

- Use CSS to add borders or underlines to elements when selected

### 9. Language of parts

- Add a language attribute to pages with content that isn't in the default language

### 10. Consistent navigation

- Adopt a universal location for your navigation menu
- Make your navigation menu consistent across your site

### 11. Consistent identification

- Label and name elements with the same function consistently
- Use identical alt text for elements with the same function

### 12. Error suggestion

- Enable elements, like forms, to identify input errors
- Communicate errors to users with text suggestions

### 13. Error prevention

- Make changes to user-controlled data reversible
- Allow users to correct errors
- Create a confirmation page that details the user's input and the website's outcome
